Projects

Travel and Tourism Management System | [Github](#) Sep-2024

Technologies Used: Java, MySQL, JDBC, Swing

Project Description: Developed a desktop application for managing travel bookings, customer details, itineraries, and payments. The system enables travel agents and customers to book trips, manage user information, and view itineraries using a user-friendly GUI. • Integrated MySQL database with Java using JDBC for storing and retrieving data. • Developed a responsive and intuitive user interface using Swing components.

Tools: Java Swing (for GUI), MySQL (for database management), JDBC (for database connectivity).
